Project Abstract Submission Form

Sec No-	Team No-	Project Title- Recipe Sharing Platform with Meal Planner
---------	----------	--

1. Abstract

The Recipe Sharing Platform with Meal Planner is a web-based application designed to provide users with a simple and convenient platform for discovering, sharing, and managing recipes. Many people find it difficult to organize recipes, plan meals, and maintain a proper list of ingredients required for cooking. This project addresses these problems by providing an integrated platform where users can create accounts, add and share recipes, browse recipes uploaded by other users, and search for recipes based on different categories.

The proposed system allows users to add recipe details such as ingredients, cooking instructions, preparation time, category, and images. Users can also rate and save recipes for future use. A meal-planning feature allows users to organize selected recipes into a weekly meal plan. The system can also generate a grocery list based on the ingredients required for planned recipes. Nutrition information can be incorporated to help users understand the nutritional value of their meals.

The application will use a React.js frontend, Node.js and Express.js backend, MongoDB database, and Cloudinary for image management. The system aims to provide an easy-to-use platform that simplifies recipe management, meal planning, and grocery preparation.

2. Team Details

Roll Number(s)	Name of the Student	Signature
2520030456	Thodeti Arun	
2520090200	Pavan	

3. Frameworks / Platforms / Software Used

- **Frontend:** React.js
- **Backend:** Node.js, Express.js
- **Database:** MongoDB
- **Image Storage:** Cloudinary
- **API:** Nutrition API
- **Programming Language:** JavaScript
- **Development Environment:** Visual Studio Code
- **Testing:** Postman
- **Version Control:** Git and GitHub
